§404.274

December of the year after the year in which the measuring period ends.

[69 FR 19925, Apr. 15, 2004]

§ 404.274 What are the measuring periods we use to calculate cost-of-living increases?

- (a) *General.* Depending on the OASDI fund ratio, we measure the rise in one index or in both indexes during the applicable measuring period (described in paragraphs (b) and (c) of this section) to determine whether there will be an automatic cost-of-living increase and if so, its amount.
- (b) Measuring period based on the CPI—(1) When the period begins. The measuring period we use for finding the amount of the CPI increase begins with the later of—
- (i) Any calendar quarter in which an *ad hoc* benefit increase is effective; or
- (ii) The third calendar quarter of any year in which the last automatic increase became effective.
- (2) When the period ends. The measuring period ends with the third calendar quarter of the following year. If this measuring period ends in a year after the year in which an ad hoc increase was enacted or took effect, there can be no cost-of-living increase at that time. We will extend the measuring period to the third calendar quarter of the next year.
- (c) Measuring period based on the AWI—(1) When the period begins. The measuring period we use for finding the amount of the AWI increase begins with the later of—
- (i) The calendar year before the year in which an *ad hoc* benefit increase is effective; or
- (ii) The calendar year before the year in which the last automatic increase became effective.
- (2) When the period ends. The measuring period ends with the following year. If this measuring period ends in a year in which an *ad hoc* increase was enacted or took effect, there can be no cost-of-living increase at that time. We will extend the measuring period to the next calendar year.

[69 FR 19925, Apr. 15, 2004]

§ 404.275 How is an automatic cost-ofliving increase calculated?

- (a) Increase based on the CPI. We compute the average of the CPI for the quarters that begin and end the measuring period by adding the three monthly CPI figures, dividing the total by three, and rounding the result to the same number of decimal places as the published CPI figures. If the number of decimal places in the published CPI values differs between those used for the beginning and ending quarters, we use the number for the ending quarter. If the average for the ending quarter is higher than the average for the beginning quarter, we divide the average for the ending quarter by the average of the beginning quarter to determine the percentage increase in the CPI over the measuring period.
- (b) Increase based on the AWI. If the AWI for the year that ends the measuring period is higher than the AWI for the year which begins the measuring period and all the other conditions for an AWI-based increase are met, we divide the higher AWI by the lower AWI to determine the percentage increase in the AWI.
- (c) Rounding rules. We round the increase from the applicable paragraph (a) or (b) of this section to the nearest 0.1 percent by rounding 0.05 percent and above to the next higher 0.1 percent and otherwise rounding to the next lower 0.1 percent. For example, if the applicable index is the CPI and the increase in the CPI is 3.15 percent, we round the increase to 3.2 percent. We then apply this percentage increase to the amounts described in §404.271 and round the resulting dollar amounts to the next lower multiple of \$0.10 (if not already a multiple of \$0.10).
- (d) Additional increase. See §404.278 for the additional increase that is possible.

[69 FR 19925, Apr. 15, 2004, as amended at 72 FR 2186, Jan. 18, 2007]

\$404.276 Publication of notice of increase.

When we determine that an automatic cost-of-living increase is due, we publish in the FEDERAL REGISTER within 45 days of the end of the measuring period used in finding the amount of the increase—

(a) The fact that an increase is due;

- (b) The amount of the increase;
- (c) The increased special minimum primary insurance amounts; and
- (d) The range of increased maximum family benefits that corresponds to the range of increased special minimum primary insurance amounts.

§ 404.277 When does the frozen minimum primary insurance amount increase because of cost-of-living adjustments?

- (a) What is the frozen minimum primary insurance amount (PIA)? The frozen minimum is a minimum PIA for certain workers whose benefits are computed under the average-indexedmonthly-earnings method. Section 404.210(a) with §404.212(e) explains when the frozen minimum applies.
- (b) When does the frozen minimum primary insurance amount (PIA) increase automatically? The frozen minimum PIA increases automatically in every year in which you or your dependents or survivors are entitled to benefits and a cost-of-living increase applies.
- (c) When are automatic increases effective for old-age or disability benefits based on a frozen minimum primary insurance amount (PIA)? Automatic cost-of-living increases apply to your frozen minimum PIA beginning with the earliest of:
- (1) December of the year you become entitled to benefits and receive at least a partial benefit;
- (2) December of the year you reach full retirement age (as defined in § 404.409) if you are entitled to benefits in or before the month you attain full retirement age, regardless of whether you receive at least a partial benefit; or
- (3) December of the year you become entitled to benefits if that is after you attain full retirement age.
- (d) When are automatic increases effective for survivor benefits based on a frozen minimum primary insurance amount (PIA)? (1) Automatic cost-of-living increases apply to the frozen minimum PIA used to determine survivor benefits in December of any year in which your child(ren), your surviving spouse caring for your child(ren), or your parent(s), are entitled to survivor benefits for at least one month.

- (2) Automatic cost-of-living increases apply beginning with December of the earlier of:
- (i) The year in which your surviving spouse or surviving divorced spouse (as defined in §§ 404.335 and 404.336) has attained full retirement age (as defined in § 404.409) and receives at least a partial benefit, or
- (ii) The year in which your surviving spouse or surviving disabled spouse becomes entitled to benefits and receives at least a partial benefit.
- (3) Automatic cost-of-living increases are not applied to the frozen minimum PIA in any year in which no survivor of yours is entitled to benefits on your social security record.

[68 FR 4702, Jan. 30, 2003]

§ 404.278 Additional cost-of-living increase.

- (a) *General.* In addition to the cost-of-living increase explained in §404.275 for a given year, we will further increase the amounts in §404.271 if—
- (1) The OASDI fund ratio is more than 32.0 percent in the given year in which a cost-of-living increase is due; and
- (2) In any prior year, the cost-of-living increase was based on the AWI as the lower of the CPI and AWI.
- (b) Measuring period for the additional increase—(1) Beginning. To compute the additional increase, we begin with—
- (i) In the case of certain uninsured beneficiaries age 72 and older (see §404.380), the first calendar year in which a cost-of-living adjustment was based on the AWI rather than the CPI:
- (ii) For all other individuals and for maximum benefits payable to a family, the year in which the insured individual became eligible for old-age or disability benefits to which he or she is currently entitled, or died before becoming eligible.
- (2) Ending. The end of the measuring period is the year before the first year in which a cost-of-living increase is due based on the CPI and in which the OASDI fund ratio is more than 32.0 percent.
- (c) Compounded percentage benefit increase. To compute the additional cost-of-living increase, we must first compute the compounded percentage benefit increase (CPBI) for both the cost-
